...for Diabetic Macular Edema

## BOULEVARD STUDY

...for Diabetic Macular Edema

*To investigate the effects and safety of RO6867461 administered intravitreally in patients with diabetic macular edema (DME)*

*Principal Investigator  
Dr. Matthew Ohr*

### **INCLUSION/EXCLUSION CRITERIA:**

- At least 18 years of age
- Diagnosis of diabetes mellitus (DM; Type 1 or Type 2)
- Macular edema associated with DR defined as: central subfield thickness (CST) of  $\geq 325 \mu\text{m}$  at screening
- Best corrected visual acuity in the study eye between 20/40-20/320
- Clear media and adequate pupillary dilation
- No IVT anti-VEGF treatment prior to Day 1
- No history of panretinal photocoagulation (PRP) treatment prior to Day 1
- No history of any macular laser photocoagulation within 3 months prior to Day 1
- No history of vitreoretinal surgery
- No anti-VEGF treatment for a retinal condition within 7 days prior to Day 1
