INCLUSION / EXCLUSION CRITERIA:

- At least 50 years of age
- Best corrected visual acuity using ETDRS in the study eye 20/100 or better
- Well demarcated area(s) of GA secondary to AMD with no evidence of prior active CNV in either eye
- Presence of hyperautofluorescence of either banded or diffuse patterns adjacent to the area of GA
- Clear, ocular media with sufficient pupillary dilation
- No GA in either eye due to causes other than AMD (e.g. Stargardts, cone rod dystrophy)
- No history of vitrectomy, submacular surgery or surgery for AMD
- No previous laser for CNV, DME RVO or PDR
- No prior treatment with Visudyne or TTT
- No previous intravitreal corticosteroid injections
- Non-study eye GA secondary to AMD with no evidence of prior or active CNV
