Generalized anxiety disorder is characterized by 6 months or more of chronic, exaggerated worry and tension which is difficult to control.

People who suffer from it experience:
- Excessive worry and anxiety
- Difficulty relaxing
- Muscle tension
- Difficulty sleeping
- Feeling frequently keyed up or on edge
- Fatigue

The Department of Psychiatry at the Ohio State University is conducting a clinical research study of an investigational drug for generalized anxiety disorder, for women and men, 18-70 years old.
Qualified participants may receive research related care and investigational drug or placebo at no cost and may receive some compensation for their time.

If you would like to learn more about this clinical research study, please call: **614-293-7109** or email: **clinicaltrials@osumc.edu**.
